Summery

Generative AI Engineer with 4 years of experience in building AI-powered applications, AI Agents, and intelligent automation solutions. Hands-on experience with LLMs (OpenAI), RAG, LangChain, FastAPI, Python, vector databases, prompt engineering, and AI orchestration frameworks to develop production-ready applications. Passionate about designing scalable, secure, and high-performance AI solutions that solve real-world business problems.

SKILLS

Programming Languages: Python, Javascript

Backend Technologies: Flask, Fast API

Database Management: Vector Database, PostgreSQL, MongoDB

AI Tools: Generative AI, LangChain, Langgraph, Autogen, AI agent frameworks, LLM Integration, Prompt Engineering, RAG

Containerization: Docker

EXPERIENCE

KPMG 

Associate Consultant

07 / 2026 – Present

Ahmedabad , India

- Working on AI and Generative AI initiatives for Gujarat Government departments to identify opportunities for intelligent automation and digital transformation.
- Engage with government stakeholders to gather, analyze, and document business and functional requirements.
- Identify and prioritize use cases where AI, Generative AI, and Agentic AI can improve operational efficiency and service delivery.
- Design, develop, and implement AI agents based on business requirements and government workflows.
- Build Proof of Concepts (PoCs) and AI-driven solutions using Large Language Models (LLMs), RAG, and Agentic AI frameworks.
- Evaluate existing processes and recommend AI-based solutions to automate repetitive tasks and enhance decision-making.
- Collaborate with cross-functional teams to integrate AI solutions with existing government applications and platforms.
- Present AI solution approaches, demonstrations, and implementation recommendations to stakeholders.
- Continuously optimize AI solutions based on user feedback, business needs, and project objectives.

Click2cloud Inc. 

Software Development Engineer (SDE)

09 / 2022 – 07/2026

Nagpur , India

- Led the development of AI-powered features using Large Language Models (LLMs), improving cloud assessment workflows and increasing user engagement by 20 percentage.
- Designed and implemented Retrieval-Augmented Generation (RAG) pipelines using LangChain and ChromaDB to enable accurate, context-aware responses from enterprise knowledge bases.
- Built AI agents with AutoGen to automate multi-step workflows, orchestrate LLM interactions, and deliver real-time intelligent responses.
- Integrated OpenAI models for document understanding, intelligent recommendations, summarization, and conversational AI capabilities.

- Developed scalable AI backend services using Python and FastAPI for model inference, prompt orchestration, and AI workflow automation.
- Engineered vector search solutions with ChromaDB to improve semantic search performance, retrieval accuracy, and response relevance.
- Optimized prompt engineering, context management, and retrieval strategies to enhance LLM response quality while reducing latency and token usage.
- Collaborated with cross-functional teams to design, deploy, and maintain production-ready Generative AI applications, while actively participating in code reviews and ensuring high-quality engineering standards.

PROJECTS

Cloud Intel | Python, FastAPI, OpenAI, LangChain, AutoGen, ChromaDB, FAISS, RAG, Vector Database

- * Developed and integrated Generative AI capabilities into a cloud assessment platform to automate cloud migration analysis, asset assessment, and intelligent recommendation generation.
- * Built Retrieval-Augmented Generation (RAG) pipelines using LangChain and ChromaDB, enabling accurate, context-aware responses from enterprise knowledge bases.
- * Designed and implemented AI agents using AutoGen to automate multi-step workflows, orchestrate LLM interactions, and deliver intelligent task execution.
- * Integrated OpenAI LLMs for document analysis, report generation, conversational AI, and cloud migration recommendations.
- * Developed scalable AI services using Python and FastAPI for model inference, prompt orchestration, and AI workflow automation.
- * Engineered semantic search using vector embeddings and ChromaDB to improve knowledge retrieval accuracy and reduce response latency.
- * Optimized prompt engineering, retrieval strategies, and context management to improve LLM response quality and operational efficiency.
- * Collaborated with cross-functional teams in an Agile environment to design, deploy, and enhance production-ready AI solutions.

HealthVision | ChromaDB, Autogen, Python, Streamlit

- * Developed a chatbot using ChromaDB for vector database storage and Autogen library for agent-based workflows.
- * Built a system that stores knowledge in vectors and leverages generative AI to provide intelligent answers to users.
- * Created multiple AI agents, each with different purposes, working in tandem to optimize the chatbot's responses based on user queries.
- * Designed a flexible agent-based workflow allowing each agent to handle specific tasks, ensuring smooth operations and personalized user interactions.
- * Integrated Autogen and ChromaDB for efficient and accurate data retrieval, providing real-time responses to diverse queries.

User Authentication System using Node.js and PostgreSQL | Nodejs , Postgresql

- * Developed a secure and scalable user authentication system using Node.js, Express, and PostgreSQL. Implemented core features including user registration, login, and role-based access control for protected routes. Key functionalities include:
- * Password Security: Utilized bcrypt for hashing passwords to ensure data security.
- * JWT Authentication: Integrated JSON Web Tokens (JWT) to handle secure token-based authentication with middleware for route protection.
- * RESTful API: Designed RESTful endpoints for user registration, login, and access to protected routes.

EDUCATION

G.H Raison College of Engineering

Bachelor of Engineering (ETC) - CGPA : 8.64

06/2018 – 06/2022

Nagpur , Maharashtra
